## Colorectal Cancer Screening Program

### **COMBAT THE 2ND LEADING CAUSE OF CANCER**

OneTGH Employer Solutions Colorectal Cancer Screening Program offers free-in-home Cologuard screening tests to help your employees get screened regularly. Our Registered Nurses and Advanced Practice Providers will help your workforce identify risks for colon cancer and refer to diagnostic testing as needed. Our program goal is to help increase the chances of finding, treating, and potentially surviving colon cancer. When caught early, colon cancer is 90% more treatable.

- Help your employees find, treat, and potentially survive colon cancer.
- Reduce absenteeism and increase the number of employees screened.
- Arm your workforce with taking ownership of their health! Abnormal results are referred to diagnostic testing to confirm the absence or presence of colorectal cancer.
- Assess changes in employees with health behaviors or conditions for individuals with a higher risk associated with colorectal cancer. Example: overweight or obese, use of alcohol or tobacco, and lack of physical activity.
