

HEART HEALTH IS BETTER HEALTH FOR ALL

AngioScreen®

Tampa General Hospital, in partnership with **AngioScreen®**, is offering on-site heart screening for employers and employees at their job sites. Our goal is to provide your workplace with an increased knowledge and awareness of the risk for heart disease and stroke through preventive vascular screening.

What can your employees expect?

- 10-minute screening time followed by a consultation
- No preparation
- No bloodwork
- No radiation
- Ultrasound of carotid artery
- Peak systolic velocity measurements
- Ankle-brachial index (test for peripheral artery disease)
- Blood pressure
- Body mass index
- Limited EKG
- Abdominal aortic aneurysm scan
- An ultrasound report with images of the lining of their carotid arteries showing their risk for heart disease and stroke

AngioScreen® is a screening used in detecting vascular disease, the leading cause of heart attacks and strokes! The testing is mobile, noninvasive, and involves no radiation and no needles. To supplement this opportunity, TGH is offering:

- Follow-up care provided at the TGH Heart & Vascular Institute
- Heart lectures that can be added to provide awareness on the importance of heart health
- Minimum of 50 participants per on-site screening
